

Specialized HealthCare Division

Office Concepts understands the critical needs and issues of the healthcare environment today – staffing, new technology integration, regulatory compliance, patient centered care and more. We strive to develop healing environments that attract patients, inspire healthcare providers and promote healing. This translates into a human-centered process that creates flexible space for our customers.

We support healthcare professionals with knowledge and furnishings, as well as with associates training in Healthcare protocol and the healing environment. Office Concepts Healthcare Division provides research designed interiors to boost efficiency, allow for constant change and accommodate acoustical and visual privacy, all with a focus on patient centered care

As Healthcare providers focus on patient care, Office Concepts is committed to providing consultative knowledge, superior products, and comprehensive services on both large and small-scale projects. Our approach begins with a commitment to simplify, streamline and support the entire health care operation. We provide a wide range of product and services from office furniture to healthcare furniture to medical products such as laboratory solutions, procedure and exam tables, medical carts, scales, and storage/shelving products.

Office Concepts is aligned with HealthCare Furnishings, Inc. which allows for both on and off-carpet product and equipment solutions. Our product and design experts address the different ways the various places, like patient rooms, waiting areas, nurses' stations, support areas, and supply rooms can function better. Our goal is to design spaces that promote healing, relieve stress, provide appropriate privacy, support recording and sharing of medical information, and integrate new technology

Office Concepts can help create environments which play a critical role in the process of healing, make a positive impact and reinforce the focus on patient centered care.
